Mr. Donald Thompson  
U.S. Army Corps of Engineers  
Huntington District  
502 8th Street  
Huntington, WV 25701

Dear Mr. Thompson:

Summaries of the 1983-2004 gypsy moth program conducted at five U.S. Army Corps of Engineers sites within the Huntington District are enclosed for your information (Table 1). Also enclosed are maps showing the trap locations at these sites (Figures 1a-1e). The purpose of the trapping program is to monitor low-level gypsy moth populations and help determine when more intensive survey methods should be employed.

Trap catches in 2004 increased to two male gypsy moths at Paint Creek Lake. Total male gypsy moths trapped at Deer Creek decreased to two moths. Over the last several years, trap catches continue to decrease at Alum Creek, Dillon Lake and Delaware Lake.

Based on the results of the trapping program at each Corps site, gypsy moth populations will not have an impact on the forest resources at these sites in the immediate future.

Figures 2a-2e show the 2004 gypsy moth Slow-the-Spread (STA) trapping results in Ohio. The inserts on each figure show close-ups of the STS results in relation to the four Corps site properties. For more information regarding the STS program, visit <http://www.gmsts.org>.

It is important for Corps to look for other gypsy moth life stages while performing their normal duties. Visit our GM Digest web site located at <http://na/fs.fed.us/wv/gmdigest> for publications that are helpful in identifying the different gypsy moth life stages.

We would like to continue the trapping program at the same intensity at all five Corps sites in 2005. Thank you for your continued cooperation and if you have any questions regarding these results, please call Karen Felton at (304) 285-1556.

Sincerely,

  
JOHN W. HAZEL
